- the amount of irrigation required to “water-in” the soluble particles is less than with larger materials.
- provides better dispersment of nutrients “more particles per square inch” are applied.
- provides a 1:0:2 ratio of nutrients (high potassium) for increased summer durability, disease resistance and winter hardness.
- all of the Potash is in the Sulfate form, to aid the turf manager where chlorides may be a problem.
- contains no Phosphorus to aid the turf manager where Poa Annuua control programs are being implemented.
